Establishing Norms

Each group should discuss and provide an answer for the following
questions

- What does this group do when two or more members disagree (ex. on
  a technical approach, a technology choice, etc)?
  - *Do you vote? Does the whole group get involved? Do you get
    someone else to decide?*

- What does this group do when a member is frustrated?
  - *What strategy do you use to talk about it? What do you do if
    you're the frustrated person? What do you do if you're the
    person someone is frustrated with? Imagine a situation where
    Person A thinks that Person B is not pulling their weight –
    write a script for how you think that conversation should go.*

- What does this group do when we merge our work together?
  - *Do we do it together? Do we require sign off from someone
    else?*

- When does this group ask for help?
  - *After 10 minutes? 15? 20? After everybody's tried to solve
    the problem? What strategies do we use before we ask for
    help?*

- How do we pair? What do we do when two group members pair with
  each other?
  - *Do members of a pair decide their own norms? Do they do
    things like keep a timer to switch positions? How often do we
    switch partners?*

- How does this group approach work "after hours" (i.e. after
  normal class hours and weekends)?
  - *Is it okay to work on your own after hours? How do we keep
    the group informed? Do we only work after hours when we can
    pair? When the entire group is present?*

- What time does this group have daily stand up?
